

Publication conditions

Originality and plagiarism

Articles are screened by journal editors through the iThenticate plagiarism system and based on their knowledge of the area in question, as well as through the use of widely available internet tools.

Authors should ensure that they have written and submitted non-plagiarized and original works only. Plagiarism takes many forms, from “passing off” another’s paper as the author’s own, to copying or paraphrasing substantial parts of another’s paper (without attribution), to claiming results from research conducted by others. Plagiarism in all its forms constitutes unethical publishing behavior and is unacceptable and penalized.

If any of the article’s content has been published previously in any form, the author should notify the journal and QU Press, which reserves the right to accept or reject the manuscript. The author has to guarantee that permission has been obtained, and any fee required has been paid thereof. For any copyrighted material included in the article whose reproduction cannot be justified as “fair use”, the author must obtain permission from the copyright owner for its reproduction, pay any fee required, and furnish QU Press with a copy of all documents granting the required permission. The author agrees to indemnify and hold QU Press exempt from any claim or proceeding undertaken on any of the aforementioned grounds.

Upon request from the author, QU Press shall grant to the author a non-exclusive license to republish the article in the same or revised form in any language in a written or edited book by the author after publication of the journal’s issue. This is subject only to the condition that a credit line, to be supplied by QU Press, will be printed in the author’s book to indicate first publication of the article in the journal.

Handling of unethical publishing behavior

- In cases of alleged or proven scientific misconduct, fraudulent publication or plagiarism, QU Press will perform all the required procedures to amend the book or article in question. This includes the prompt publication of an erratum, clarification or, in the most severe case, the retraction of the work in question.
- Editors, in coordination with QU Press, will take responsive measures when ethical concerns are raised with regard to a submitted manuscript or published paper. Every reported act of unethical publishing behavior will be looked into, even if it is discovered years after publication.

Manuscript withdrawal by the author:

- Withdrawal of a manuscript will be permitted only for the most compelling and unavoidable reasons. Withdrawals are only excused during the first editorial stage (one week after the first submission) – in this case, a formal email to the Editor-in-Chief is required while mentioning the reason for withdrawal.

For withdrawal of a manuscript in the second stage (peer-review stage), the author shall submit an “Article withdrawal Form” signed by all authors and mentioning the reason for withdrawal to

the editor in charge. Author(s) must not assume that their manuscript has been withdrawn until they have received a written notification to this effect by the Editor-in-Chief.

- If the author(s) request(s) the withdrawal of his/her manuscript after the peer-review process or in the production stage (early release or ahead of publishing), the author(s) shall clarify the reason of withdrawal and may pay a withdrawal penalty to cover the article processing charges spent by the journal and QU Press.

Withdrawal of journal articles for misconduct:

- QU Press follows the Code of Conduct of the Committee on Publication Ethics (COPE) and the COPE Flowcharts for Resolving Cases of Suspected Misconduct, available through the following link: <https://publicationethics.org/guidance/Flowcharts>.

- This is only used for the “Article in Press”, which represents the early version of the accepted articles. If any article at the stage of “Article in Press”, by any means, represents infringements of professional ethical codes, such as multiple submissions, bogus claims of authorship, plagiarism, fraudulent use of data or similar incidences, the article may be withdrawn depending on the editor’s discretion. In this regard, QU Press’s decision must be considered as final, following the deep assessment and analysis of the situation, on a case-by-case basis.

- Infringements of professional ethical codes, such as multiple submissions, sham claims of authorship, plagiarism, fraudulent use of data and similar claims will lead to the retraction of an article. Occasionally, a retraction may be considered to correct errors in submission or publication.
